

## Adding an existing project to GitHub using the command line

---

- 1 - Very First [Create a new repository](#) on GitHub.
- 2 - Open Terminal Commands to execute
- 3 - Change the current working directory to your local project.

- 4- Initialize the local directory as a Git repository.

```
$ git init
```

- 5 -Add the files in your new local repository. This stages them for the first commit.

```
$ git add .
```

- 6- Commit the files that you've staged in your local repository.

```
$ git commit -m "First commit"
```

- 7- At the top of your GitHub repository's Quick Setup page, click to copy the remote repository URL.

- 8- In Terminal, add the URL for the remote repository where your local repository will be pushed

```
$ git remote add origin <remote repository URL> <- URL Of the Git Repo
```

- 9 - To Verify New Remote URL is Correct

```
$ git remote -v
```

- 10- Push the changes in your local repository to GitHub.

```
$ git push -u origin master
```
